ASSIGNMENT 02

PATIENT APPOINTMENT FORM — ADVANCED FIELDS USE CASE

Zoho Creator | Advanced Fields Lab Record

Aim

Extend Patient_Appointment_Form with seventeen Advanced Fields to support provider lookup, visit preparation, optional attachments, fee estimates, and appointment check-in.

Procedure

Open Patient Appointment Booking & Clinic Operations Management, extend the form, configure the Clinics and Providers reference forms, verify field rules, and preview generated values.

1. Appointment ID and Provider Lookup

An Auto Number creates a unique appointment reference. A Lookup field connects the request to a Providers directory so provider specialty, clinic, and availability are selected from an approved source.

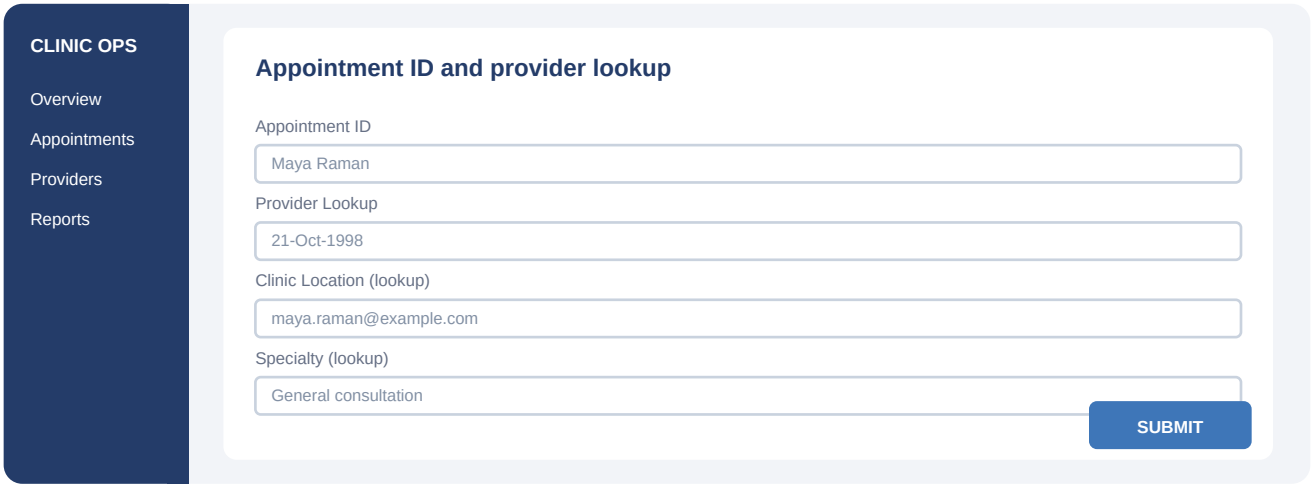

Figure 1: Appointment ID and provider lookup — illustrative configuration.

2. Provider Directory Master

The Providers form stores provider name, specialty, clinic location, appointment duration, and bookable schedule. Staff maintain the directory and patients select only bookable options.

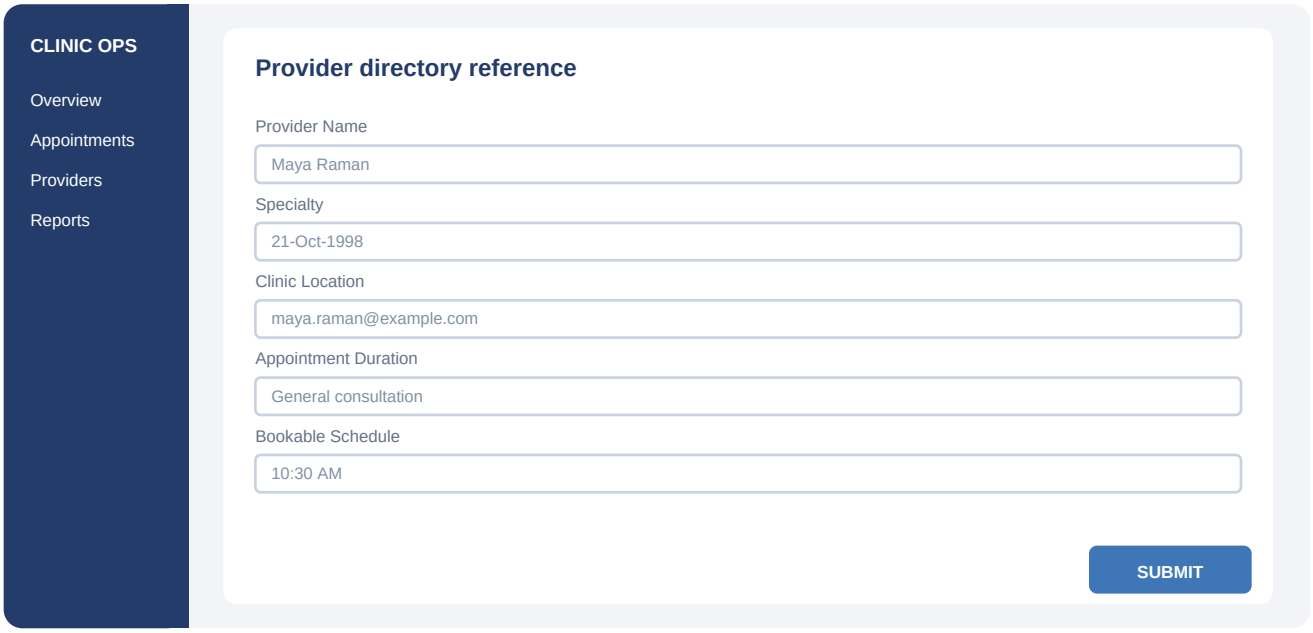

Figure 2: Master provider directory — illustrative preview.

3. Visit Choices and Cost Details

Decision Box records whether this is a first visit. Rich Text displays clinic preparation instructions. Percent and Currency fields represent an insurance coverage estimate and consultation fee.

Figure 3: First-visit decision, instructions, coverage estimate, and fee fields.

4. Identity & Referral Documents

Image stores an optional patient profile image for record matching. File Upload accepts a referral or insurance document when needed. Decimal records a non-diagnostic measurement only where a clinician requests it.

Figure 4: Identity and supporting document fields.

5. Family Visit & Media Details

The Family_Member_Details SubForm supports multiple related appointment requests where appropriate. URL records a referring clinic website; optional Video and Audio fields allow a patient to provide a brief non-urgent context note.

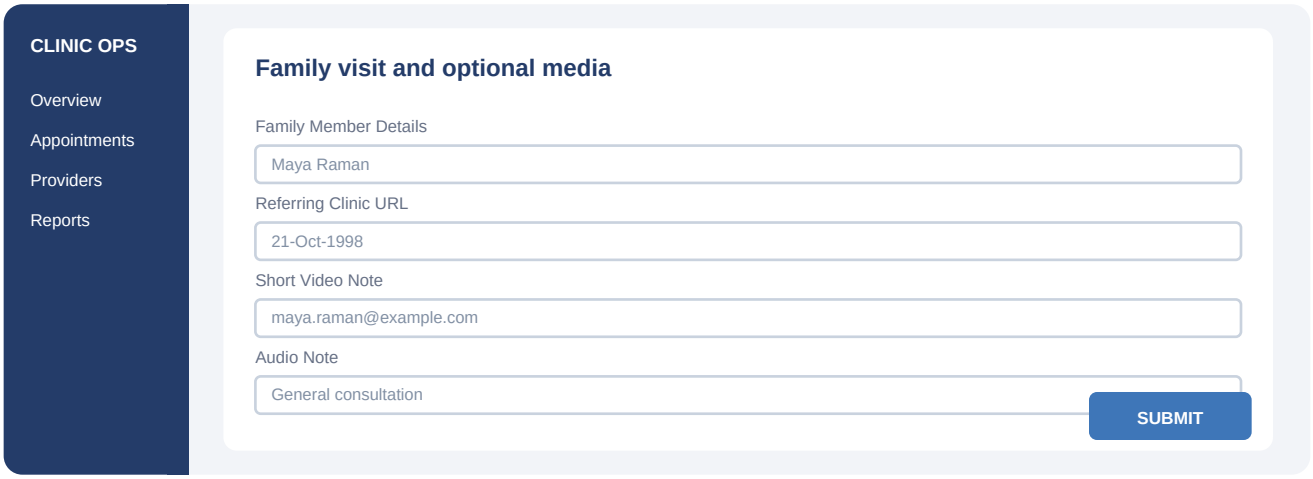

Figure 5: Related patient details and optional media fields.

6. Fee Estimate Formula

A read-only Formula field estimates the patient share from the consultation fee and coverage percentage. Staff confirm actual charges and eligibility; the estimate is not a billing determination.

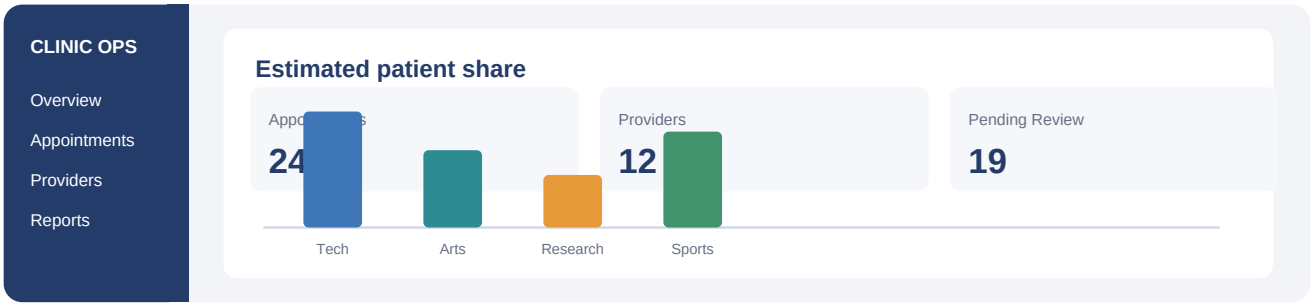

Figure 6: Illustrative computed patient-share preview.

7. Consent and System-Generated Values

The patient reviews the clinic information notice and provides an electronic signature where required. Date-Time records request submission, Auto Number assigns an appointment reference, and QR/Barcode encodes that reference for front-desk check-in.

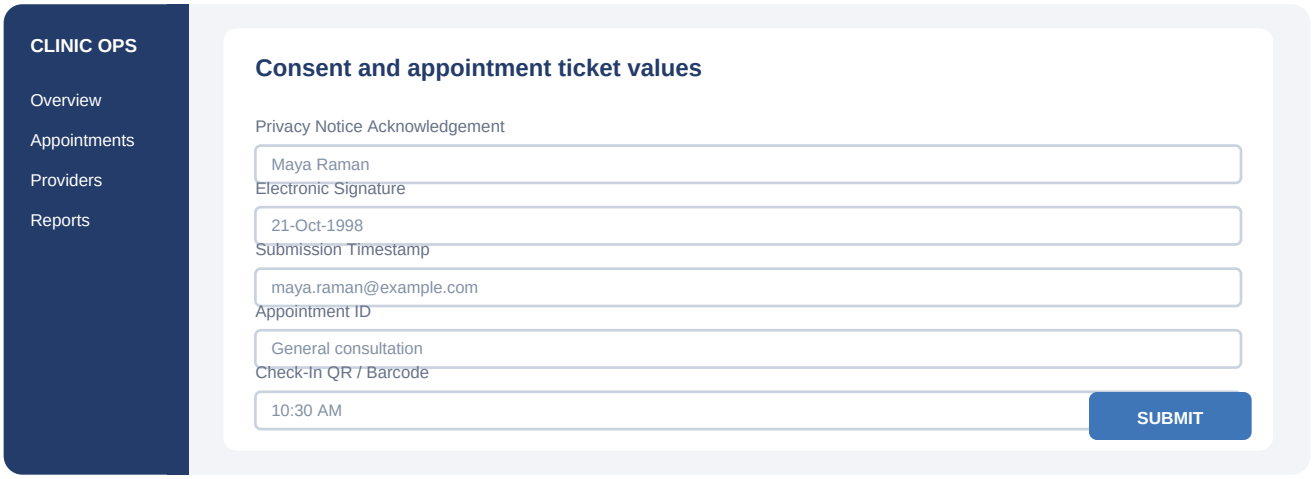

Figure 7: Consent and system-generated appointment values.

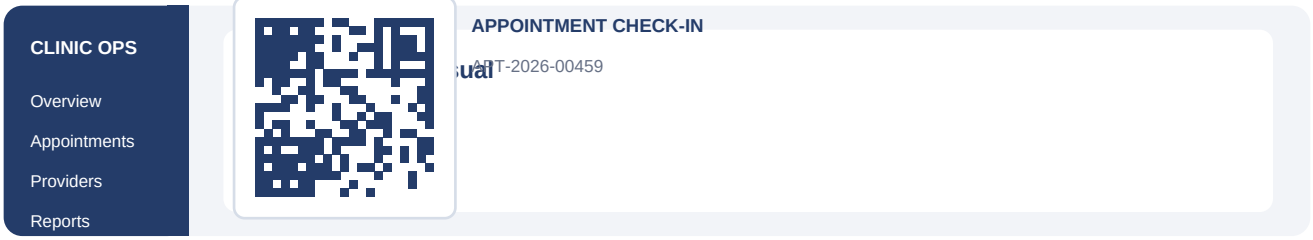

Figure 8: QR-style ticket graphic is illustrative and not scannable.

8. Advanced Fields Used and Their Mapping

Advanced Field	Form Field Name	Purpose	Sample / Behaviour
Decision Box	Is_First_Visit	Records visit status	Yes / No
Rich Text	Preparation_Instructions	Displays clinic guidance	Bring existing records
URL	Referring_Clinic_URL	Stores referral clinic link	clinic.example/referrals
Image	Patient_Profile_Image	Optional record matching	profile.jpg
Percent	Coverage_Estimate	Planning estimate only	80%
Currency	Consultation_Fee	Displays listed fee	■800.00
Decimal	Clinician_Requested_Value	Optional clinician-requested value	36.70
Date-Time	Request_Submitted_On	Submission timestamp	21-Oct-2026 09:30
SubForm	Family_Member_Details	Related appointment requests	R. Raman — Parent
Lookup	Provider_Lookup	Selects approved provider	Dr. N. Iyer
Signature	Patient_Signature	Captures acknowledgement	Signed
File Upload	Referral_Document	Uploads referral when needed	referral.pdf
Audio	Patient_Audio_Note	Optional short context note	note.mp3
Video	Patient_Video_Note	Optional brief context note	note.mp4
Auto Number	Appointment_ID	Unique request reference	APT-2026-00459
Formula	Estimated_Patient_Share	Estimates listed fee less coverage	Auto-computed
QR/Barcode	Checkin_QR_Code	Encodes appointment reference	APT-2026-00459

9. Validation and Configuration Rules

- Provider_Lookup selects from the maintained Providers directory and shows only bookable options.
- Family_Member_Details allows up to four related appointment requests; each person has separate consent and contact details.
- Referral_Document accepts PDF/JPG/PNG up to 5 MB; profile image accepts JPG/PNG up to 2 MB.
- Optional audio is limited to 30 seconds and video to 60 seconds with a 50 MB maximum.
- Coverage_Estimate is between 0 and 100 percent; Consultation_Fee is non-negative and formatted in INR.
- Estimated_Patient_Share is read-only and explicitly labeled as an estimate.
- Appointment_ID uses APT-, year, and a six-digit sequence; the QR code is generated after the ID.
- Electronic consent is required before the request is submitted.

10. Workflow Summary

- Patient completes identity and contact sections.
- Patient selects a provider and requests an appointment time.
- Optional referral documents or visit context are attached.
- The form calculates an estimate, records consent, and generates an appointment reference.
- Reception staff verify provider availability, confirm the slot, and use the QR reference at check-in.

11. Expected Learning Outcomes

- Use Advanced Fields for appointment management and intake.
- Configure directory Lookup and related-record SubForm fields.
- Use Formula and Auto Number fields for estimates and references.
- Apply attachment limits and QR check-in while keeping optional information clearly scoped.

Result

The design extends the booking form with seventeen Advanced Fields and documents provider lookup, optional files, fee estimation, consent, and check-in. All interface figures are illustrative.
