ASSIGNMENT 03
PATIENT APPOINTMENT REPORTS SUITE

REPORT TYPES USE CASE | Zoho Creator Report Configuration and Visualization

1. Aim

Design nine Zoho Creator reports for Patient_Appointment_Form: List, Spreadsheet, Kanban, Calendar, Map, Timeline, Pivot Table, Chart, and Summary views.

2. Problem Statement

Reception staff need a confirmed appointment roster, schedulers need a provider calendar, clinicians need a daily visit list, and clinic managers need wait-time and appointment-volume summaries.

3. Scope of the Use Case

- Application: Patient Appointment Booking & Clinic Operations Management
- Base Form: Patient_Appointment_Form
- Users: Reception, Schedulers, Clinicians, Clinic Managers
- Deliverable: Nine purpose-built appointment reports
- Objective: Provide each clinic role with an appropriate operational view.

4. Report Types Used and Their Mapping

Report Type	Report Name	Purpose	Key Configuration
List View	Appointment_Request_List	Searchable appointment roster	Patient, provider, visit type, requested time, status
Spreadsheet View	Daily_Appointment_Spreadsheet	Bulk operational updates	Editable confirmation and check-in fields; grouped by provider
Kanban View	Appointment_Status_Board	Track request lifecycle	Requested / Review / Confirmed / Checked In / Completed / Cancelled
Calendar View	Provider_Schedule_Calendar	Plan provider availability	Confirmed date/time grouped by provider
Map View	Clinic_Location_Map	View clinic locations	Clinic address markers; no patient home locations
Timeline View	Appointment_Request_Timeline	Track request volumes	Request_Submitted_On grouped by week
Pivot Table	VisitType_By_Provider_Pivot	Compare visit demand	Rows: visit type; columns: provider; values: count
Chart View	Appointment_Demand_Chart	Visualize demand by visit type	Bar chart; appointment count by type
Summary View	Clinic_Appointment_Summary	Summarize workload	Group by provider; requested, confirmed, completed, cancelled counts

5. Procedure — List View

The List View provides a searchable appointment roster with patient reference, provider, appointment type, requested date, and booking status. Confirmed appointments appear first when the date is near.

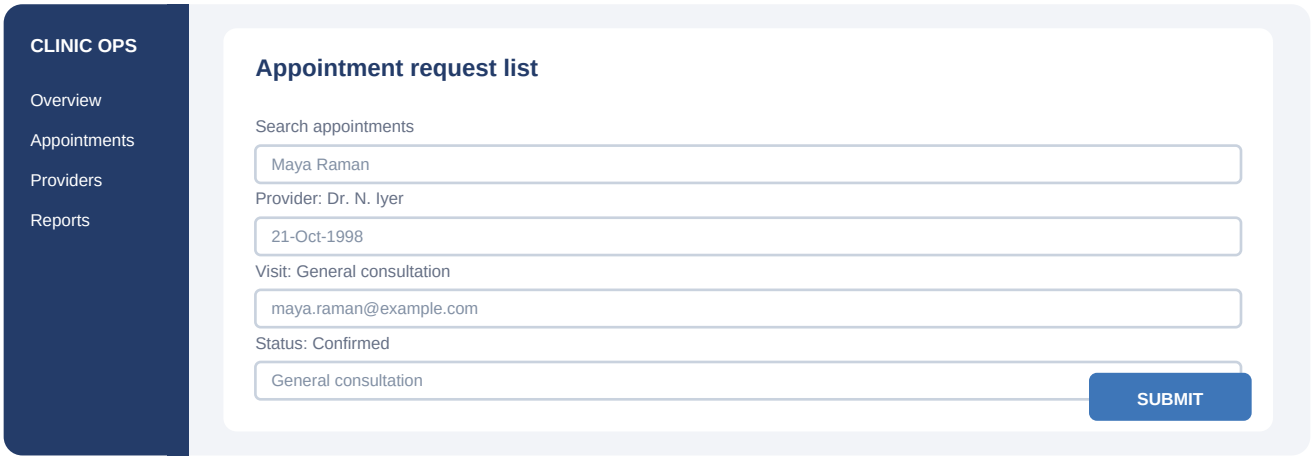

Figure 1: List View of Appointment Requests.

Procedure — Spreadsheet View

The Spreadsheet View lets authorized schedulers update confirmation and check-in status in a grid. Patient identity and clinical notes remain read-only in this view.

Figure 2: Spreadsheet View for appointment confirmation and check-in.

Procedure — Kanban View

The Kanban report groups requests by lifecycle status. Reception moves a request to Review, then Confirmed or Cancelled; check-in staff mark arrivals.

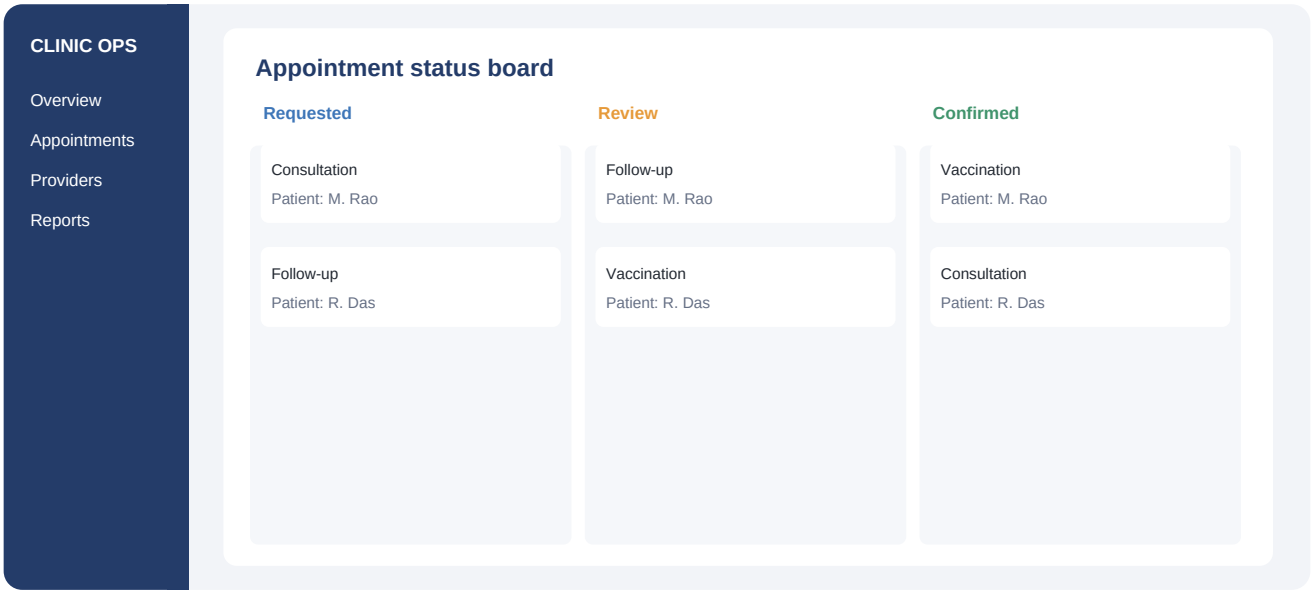

Figure 3: Kanban board grouped by appointment status.

Procedure — Calendar View

The Calendar View shows confirmed appointments by provider, date, and time. Selecting an entry opens scheduling details for conflict checks.

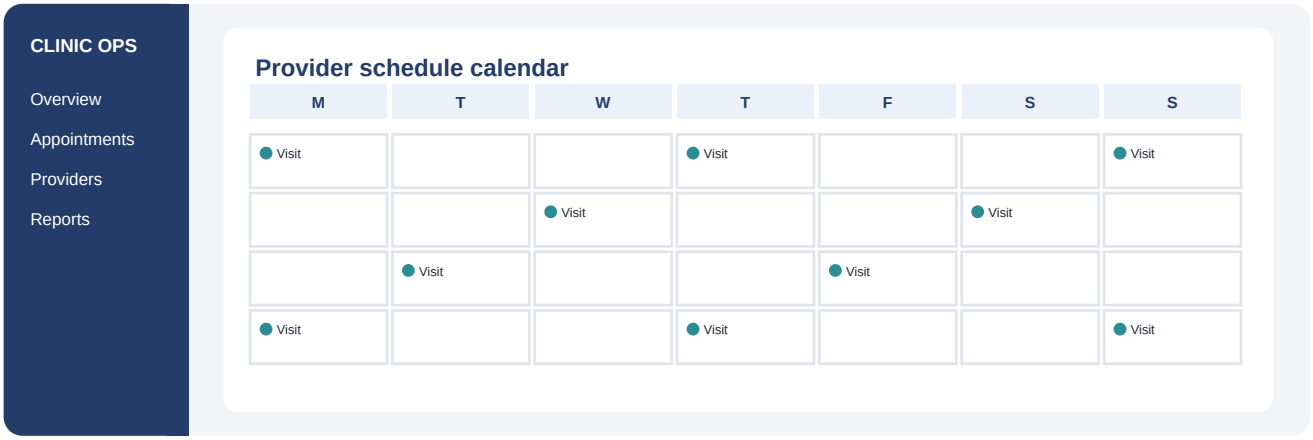

Figure 4: Provider appointment calendar — illustrative schedule entries.

Procedure — Map View

The Map View displays clinic locations to help patients and staff identify service sites. It uses clinic addresses only; patient residential addresses are not plotted.

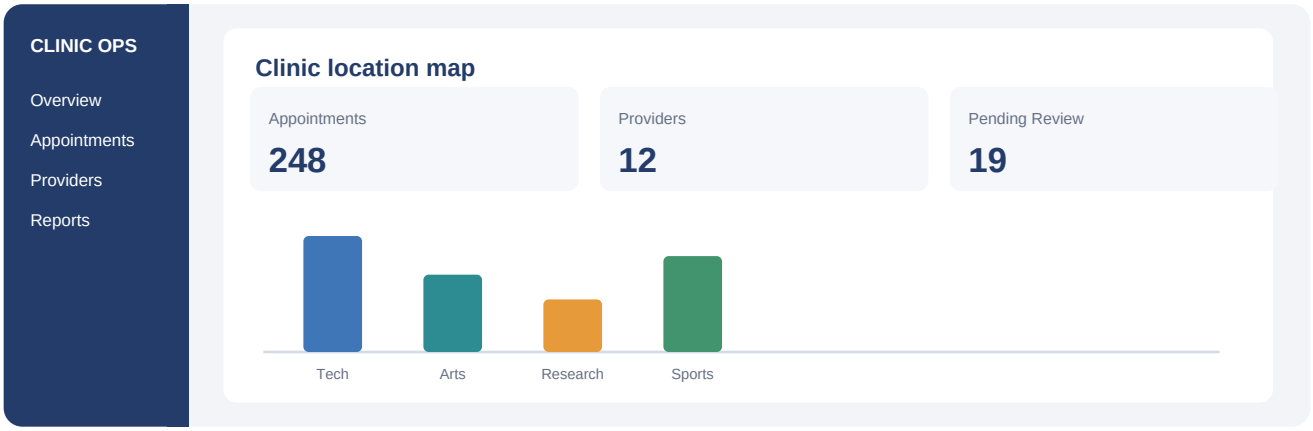

Figure 5: Schematic clinic location view; no patient locations are shown.

Procedure — Timeline View

The Timeline View plots appointment requests over time, grouped by week, allowing managers to monitor booking volume and plan reception coverage.

Figure 6: Illustrative weekly appointment request timeline.

Procedure — Pivot Table

The Pivot Table cross-tabulates visit types against providers and counts requests to support capacity planning.

Visit Type	Dr. Iyer	Dr. Das	Dr. Shah	Total
General Consultation	42	38	31	111
Follow-up	27	33	25	85
Vaccination	18	21	16	55
Total	87	92	72	251

Figure 7: Appointment requests by visit type and provider (illustrative sample counts).

Procedure — Chart View

The Chart View shows appointment demand by visit type so clinic managers can identify busy services and adjust schedule capacity.

Figure 8: Appointment demand chart — sample values are illustrative.

Procedure — Summary View

The Summary View groups records by provider and reports requested, confirmed, completed, and cancelled appointment totals.

Provider	Requested	Confirmed	Completed	Cancelled
Dr. N. Iyer	96	82	74	7
Dr. R. Das	101	88	79	6
Dr. P. Shah	78	67	60	5

6. Report-wise Configuration and Validation Rules

- List View filters by provider, visit type, clinic, and status; restrict clinical notes to authorized roles.
- Spreadsheet editing is limited to scheduler roles and operational fields only.
- Kanban movement updates Appointment_Status and records the actor and timestamp.
- Calendar shows confirmed appointments and flags provider time conflicts.
- Map shows approved clinic locations only.
- Timeline uses Request_Submitted_On and groups requests by week.
- Pivot displays empty cells as zero; chart refreshes after confirmation or cancellation.
- Summary counts workload by provider and visit status.

7. Workflow Summary

- Patients submit appointment requests through Patient_Appointment_Form.
- Reception reviews requests in the List and Timeline reports.
- Schedulers resolve requests in the Kanban board and spreadsheet.
- Clinicians use Calendar for confirmed visits.
- Managers review visit-type demand and provider workload in Pivot, Chart, and Summary reports.

8. Expected Learning Outcomes

- Choose report types based on clinic scheduling needs.
- Configure grouping and summaries over shared appointment records.
- Use calendar and Kanban views to coordinate appointment status.
- Use aggregate views to plan provider capacity.

9. Deliverable and Result

The design specifies all nine report types with names, purposes, configurations, and privacy-conscious display rules. Figures contain illustrative sample values and are not live clinic data.
