ASSIGNMENT 04
PATIENT APPOINTMENT COMMAND CENTER

PAGE ELEMENTS USE CASE | Zoho Creator Page Builder Configuration and Visualization

1. Aim

Design one internal Command Center Page using all eleven Page Builder elements: Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets, and Viewer.

2. Problem Statement

Reception and scheduling teams need one workspace to see appointment load, find a patient request, resolve pending bookings, send confirmations, and review uploaded referral documents with appropriate access controls.

3. Scope of the Use Case

- Application: Patient Appointment Booking & Clinic Operations Management
- Page: Appointment_Command_Center_Page
- Users: Reception, Schedulers, Clinicians, Clinic Manager
- Underlying form/report: Patient_Appointment_Form, Patient_Appointment_Report, Appointment_Demand_Chart
- Objective: Combine scheduling, search, review, and reference information in one internal workspace.

4. Page Elements Used and Their Mapping

Page Element	Element Name	Purpose	Placement
Panel	Appointment_Command_Center_Panel	Primary container	Wraps the page
Board	Appointment_Status_Board	Move requests through booking stages	Central workspace
Chart	Appointment_Demand_Chart_Widget	Counts by visit type	Top-right beside Gauge
Gauge	Daily_Schedule_Capacity_Gauge	Confirmed slots versus capacity	Top-left overview
Search	Patient_Appointment_Search	Find patient, ID, provider	Top of page
Form	Quick_Appointment_Request_Form	Enter phone requests	Expandable side panel
Report	Full_Appointment_Report	Review appointment records	Below Board
Snippets	Clinic_Preparation_Guidance	Reusable preparation instructions	Reference sidebar
Button	Send_Appointment_Confirmation	Send approved booking confirmation	Above Board
Widgets	Provider_Availability_Widgets	Provider availability and clinic status	Bottom strip
Viewer	Referral_Document_Viewer	Review selected referral attachment	Sidebar below Snippets

5. Page Layout and Procedure

Section 1 — Overview Strip

Place the Daily Schedule Capacity Gauge, Appointment Demand Chart, and Patient Appointment Search at the top. The Gauge compares confirmed visits with available slots; the chart summarizes visit types; Search locates a request.

Figure 1: Illustrative Command Center overview with Gauge, Chart, and Search.

Section 2 — Processing Workspace

Place the Send Appointment Confirmation Button near the Appointment Status Board. The Board includes Requested, Review, Confirmed, Checked In, Completed, and Cancelled stages. Moving a card updates the underlying status.

Figure 2: Illustrative Appointment Board and embedded report.

Section 3 — Detailed Data

Embed Full_Appointment_Report below the Board so schedulers can inspect record-level appointment details. Limit export to authorized clinic managers.

Section 4 — Reference and Quick Actions

Use the sidebar for Clinic_Preparation_Guidance, Referral_Document_Viewer, and the expandable Quick_Appointment_Request_Form. These support intake, visit preparation questions, and referral review.

Figure 3: Illustrative reference sidebar, Viewer, Form, and operational Widgets.

Section 5 — Operations Strip

Place Provider_Availability_Widgets along the bottom. Show bookable slots and clinic open/closed status, with a refresh time for operational accuracy.

6. Configuration and Access Rules

- Panel: use role-based visibility for reception, schedulers, clinicians, and managers.
- Board: map each column to Appointment_Status and log every transition.
- Chart: refresh after new requests, confirmations, and cancellations.
- Gauge: compare confirmed appointments with provider capacity for the selected day.
- Search: match patient name, Appointment_ID, contact number, and provider.
- Form: apply the main form validations and mark manually entered requests for review.
- Report: limit export and sensitive fields to authorized roles.
- Snippets: maintain preparation guidance centrally; avoid displaying individualized clinical advice.
- Button: send confirmations only after staff confirm the provider and appointment slot.
- Widgets: show current provider slots and clinic status.
- Viewer: restrict referral document access to staff with a care-related role.

7. Workflow Summary

- Reception opens Appointment_Command_Center_Page and checks capacity.
- Search locates an appointment request.
- Staff move records across booking stages and review referral documents when authorized.
- The confirmation Button is available after a slot is verified.
- Phone requests are captured through the quick intake form.
- Schedulers review the complete report and managers export only when authorized.

8. Expected Learning Outcomes

- Use all eleven Page Builder elements in one clinic workspace.
- Combine Forms, Reports, Gauge, Chart, and Board elements.
- Apply access controls to patient information and attachments.
- Use reusable instructions and availability widgets to support scheduling.

9. Deliverable and Result

The page design maps all eleven required elements to their function and location. Figures are illustrative; real appointment availability and access permissions must be configured in the clinic application.
