

EXPERIMENT 4

Reports Creation in Zoho Creator

1. Aim

To study how reports are created in Zoho Creator and to build List, Kanban, Calendar and Summary reports, with filter criteria, sorting and grouping, for the Hostel Complaint Management System so that stored form data can be viewed, analysed and exported in a meaningful way.

2. Introduction

In Zoho Creator, a form is used to collect data and a report is used to display that data. Every record submitted through a form is stored in the application, and a report presents those records to the user in a chosen layout. Reports can show all records or only a filtered subset, and users can search, sort, group, edit, delete and export records directly from the report view.

2.1 Types of Reports

Report Type	Purpose
List Report	Displays records as rows and columns in a simple, editable table.
Grid Report	Displays records as a spreadsheet-like grid with fixed columns.
Kanban Report	Shows records as cards arranged in columns based on a field such as status.
Calendar Report	Plots records on a calendar according to a date field.
Timeline Report	Arranges records chronologically along a timeline.
Map Report	Shows records on a map using address or location fields.
Summary Report	Groups records and shows aggregated values such as counts and totals.

3. Objectives of the Study

- To understand the role of reports in a Zoho Creator application.
- To create List reports from existing forms and choose which fields are displayed.
- To apply filter criteria so that a report shows only the required records.
- To use sorting and grouping to organise report data.
- To create Kanban, Calendar and Summary reports for different viewing needs.
- To test the reports with sample data and export report output.

4. Application Selected: Hostel Complaint Management System

The Hostel Complaint Management System is used for this experiment. Its Complaint Details form stores Student Name, Room Number, Block, Complaint Type, Description, Priority, Date of Complaint, Status and Assigned Staff. The application also contains a Feedback form for collecting feedback after resolution. Reports are created on the Complaint Details form to display this data in different layouts.

4. Application Selected: Hostel Complaint Management System

The Complaint Details form stores the information required to track hostel complaints from submission through resolution. Different reports are created from the same form so that complaints can be viewed by status, date and type.

5. Procedure

- Log in to Zoho Creator and open the Hostel Complaint Management System in edit mode.
- Check that the Complaint Details form contains sample complaint records.
- Add a new Report component and select the Complaint Details form as the source.
- Create the List, Kanban, Calendar and Summary reports.
- Save the application and open each report to check the output.
- Take screenshots of the reports.

6. Reports Created

Report Name	Type	Description
All_Complaints	List	No filter
Open_Complaints	List	Status = Open
Complaint_Status_Board	Kanban	Grouped by Status
Complaint_Calendar	Calendar	Date of Complaint
Complaints_By_Type	Summary	Grouped by Complaint Type

7. Illustrative Example

7.1 List Report - All Complaints

Name : Sanshia.J Reg No: 240701471

7. Illustrative Example

7.1 List Report - All Complaints

Complaint ID	Student Name	Room No.	Complaint Type	Priority	Status	Date of Complaint
CPL-001	Arjun S	A-101	Electrical	High	Open	12-Sep-2025
CPL-002	Divya R	B-303	Water Supply	Medium	In Progress	11-Sep-2025
CPL-003	Karthik M	A-305	Maintenance	Low	Resolved	10-Sep-2025
CPL-004	Harini G	C-107	Wi-Fi	High	Open	10-Sep-2025
CPL-005	Rahul V	B-301	Cleanliness	Medium	Resolved	09-Sep-2025
CPL-006	Sneha P	A-210	Furniture	Low	Open	08-Sep-2025

Fig 1. List Report - All Complaints

7.2 Kanban Report - Complaint Status Board

Open (3)	In Progress (1)	Resolved (2)
Wi-Fi issue Harini G High	Water supply issue Divya R Medium	Room cleaning Rahul V Medium
Electrical problem Arjun G High		Fan repair Karthik M Low
Furniture request Sneha P Low		

7.2 Kanban Report - Complaint Status Board

Open (3)	In Progress (1)	Resolved (2)
Wi-Fi issue Harini G High	Water supply issue Divya R Medium	Room cleaning Rahul V Medium
Electrical problem Arjun G High		Fan repair Karthik M Low
Furniture request Sneha P Low

7.3 Calendar Report - Complaint Calendar

Name : Sanshia.J

Reg No: 240701471

7.3 Calendar Report – Complaint Calendar

7.4 Summary Report - Complaints by Type

Fig 3. Calendar Report – Complaint Calendar

7.4 Summary Report – Complaints by Type

Fig 4. Summary Report – Complaints by Type

8. Advantages

- Data from one form can be presented in many ways without repeating it.
- Filter criteria show only the records that matter to a particular user.
- Sorting, grouping and searching make large record sets easy to manage.
- Kanban, Calendar and Summary reports give visual insight beyond a plain table.
- Reports can be edited, exported and shared with little or no coding.

9. Limitations

- Incorrect criteria or field selection produces misleading reports.
- Some report types and options depend on the Zoho Creator plan in use.
- Complex calculations or cross-form summaries may need Deluge scripting or Pages.
- Very large data sets can make report loading slower.

10. Result

The experiment was successfully completed. Reports for the Hostel Complaint Management System were created in Zoho Creator, including List reports with filter criteria, a Kanban report, a Calendar report and a Summary report. The reports were tested with sample records and produced the expected output.

11. Conclusion

Reports are the presentation layer of a Zoho Creator application. By combining report types with criteria, sorting and grouping, a single set of forms can serve many different information needs. The Hostel Complaint example shows how complaint status, dates and types can be tracked clearly once suitable reports are in place.
